

CLAIM LISTING

If entered, this claim listing replaces all prior versions of claim listings in the present application.

1. **(Currently Amended)** A method in a computer system for generating a display page, the method comprising:

receiving a request **from a user** to generate a display page, wherein

the display page comprises realtime information **[[and]]** , non-realtime

information, **and user-specific information,**

the realtime information comprises information ~~retrieved from a database and~~

displayable without ~~further~~ computation, **[[and]]**

the non-realtime information comprises information requiring computation to

generate the non-realtime information prior to display, **and**

the user-specific information is pre-selected by a manager of the user;

retrieving the realtime information to be included on the requested display page;

if a previously cached version of the non-realtime information is available, generating the

requested display page comprising the retrieved realtime information and the

previously cached non-realtime information; **and**

if a previously cached version of the non-realtime information is not available,

generating the requested display page comprising the retrieved realtime

information and an indication that the non-realtime information is not yet

ready for display, wherein the indication that the non-realtime information

is not yet ready for display is provided in a location in which the non-

realtime information is to be displayed,

requesting generation of the non-realtime information,
caching the generated non-realtime information, and
generating the requested display page comprising the retrieved realtime
information and the cached non-realtime information in response to a
subsequent request for the requested display page. ~~[[; and]]~~

~~drilling down to view underlying information used to generate a selected portion of
the display page, in response to a request selecting the selected portion of the
display page, wherein said drilling down comprises
retrieving the underlying information used to generate the selected portion of
the display page, and
presenting the underlying information by virtue of one of
regenerating the display page comprising the realtime information,
the non-realtime information, and the underlying information,
and
generating a new display page comprising the underlying information.~~

2. (Previously Presented) The method of claim 1 wherein said generating the requested display page comprising an indication that the non-realtime information is not yet ready for display further comprises:

including a link for requesting the display page.

3. (Canceled)

4. **(Currently Amended)** The method of claim 1 wherein the request to generate the display page is received when ~~[[a]]~~ **the** user logs on to one of the computer system and a client coupled to the computer system.

5. (Original) The method of claim 4 wherein the display page is a homepage.
6. (Canceled)
7. (Canceled)
8. (Original) The method of claim 1 wherein the generated information includes a graphical representation of information.

9. **(Currently Amended)** A computer system for generating a display page of information, comprising:

a component configured to retrieve information specific to a user to be included on the display page, wherein

the information specific to the user is pre-selected by a manager of the user;

a component configured to retrieve realtime information to be included on the display page, wherein

the realtime information comprises information ~~retrieved from a database and~~ displayable without **further** computation;

a component configured to request non-realtime information to be included on the display page and to cache the generated non-realtime information, wherein

the non-realtime information comprises information requiring computation to generate the non-realtime information prior to display;

a component configured to,

if a cached version of the non-realtime information is available, generate the display page comprising the realtime information and the cached non-realtime information, and

if a cached version of the non-realtime information is not available,

generate the requested display page comprising the retrieved realtime information and an indication that the non-realtime information is not yet ready for display, wherein the indication that the non-realtime information is not yet ready for display is provided in a location in which the non-realtime information is to be displayed, request generation of the non-realtime information, cache the generated non-realtime information, and generate the requested display page comprising the retrieved realtime information and the cached non-realtime information in response to a subsequent request for the requested display page; and a component configured to send to a user computer system the display page for display to a user so that the user can view the realtime information if the non-realtime information is not yet ready. [[; and]]

~~a component configured to drill down to view underlying information used to generate a selected portion of the display page, in response to a request selecting the selected portion of the display page, wherein said drilling down comprises retrieving the underlying information used to generate the selected portion of the display page, and presenting the underlying information by virtue of one of regenerating the display page comprising the realtime information, the non-realtime information, and the underlying information, and~~

~~generating a new display page comprising the underlying information.~~

10. (Previously Presented) The computer system of claim 9 wherein the component configured to generate the requested display page comprises an indication that the non-realtime information is not yet ready for display is further configured to include a link for requesting the display page.

11. (**Currently Amended**) The computer system of claim 9 wherein the request to generate the display page is received from ~~[[a]]~~ the user.

12. (**Currently Amended**) The computer system of claim 9 wherein the request to generate the display page is received when ~~[[a]]~~ the user logs on to one of the computer system and a client coupled to the computer system.

13. (Original) The computer system of claim 12 wherein the display page is a homepage.

14-15. (Canceled)

16. (Previously Presented) The computer system of claim 9 wherein the generated information includes a graphical representation of the business information.

17-21. (Canceled)

22. (Previously Presented) The method of Claim 1 further comprising:

if a previously cached version of the non-realtime information is available,

requesting re-generation of the non-realtime information subsequent to said

generating the requested display page comprising the previously cached

non-realtime information,

caching the re-generated non-realtime information, and

generating the requested display page comprising the retrieved realtime information and the cached re-generated non-realtime information in response to a subsequent request for the requested display page.

23. (Currently Amended) A computer-readable storage medium comprising program instructions executable to:

receive a request **from a user** to generate a display page, wherein

the display page comprises realtime information **[[and]]** , non-realtime information, **and user-specific information,**

the realtime information comprises information ~~retrieved from a database and~~ displayable without **further** computation, **[[and]]**

the non-realtime information comprises information requiring computation to generate the non-realtime information prior to display, **and**

the user-specific information is pre-selected by a manager of the user;

retrieve the realtime information to be included on the requested display page;

if a previously cached version of the non-realtime information is available, generate the requested display page comprising the retrieved realtime information and the previously cached non-realtime information; **and**

if a previously cached version of the non-realtime information is not available, generate the requested display page comprising the retrieved realtime information and an indication that the non-realtime information is not yet ready for display, wherein the indication that the non-realtime information is not yet ready for display is provided in a location in which the non-realtime information is to be displayed,

request generation of the non-realtime information,
cache the generated non-realtime information, and
generate the requested display page comprising the retrieved realtime information
and the cached non-realtime information in response to a subsequent
request for the requested display page. ~~[[; and]]~~

~~drill down to view underlying information used to generate a selected portion of the
display page, in response to a request selecting the selected portion of the
display page, wherein said drill down instructions comprise further
instructions to
retrieve the underlying information used to generate the selected portion of
the display page, and
present the underlying information by virtue of one of
regenerating the display page comprising the realtime information,
the non-realtime information, and the underlying information,
and
generating a new display page comprising the underlying information.~~

24. (Canceled)

25. (Canceled)
